

## Nuclear Industry Value Chain

### Identifying Major Market Trends

The Ux Consulting Company (UxC) announces the publication of an updated February 2011 comprehensive report analyzing the entire global Nuclear Industry Value Chain (NIVC). An accompanying April 2011 detailed Addendum has also been published to analyze the impacts of the Fukushima accident in Japan on the industry. Despite Fukushima's negative impacts, there are numerous reasons for the growth of global nuclear power, including a world hungry for all forms of energy, increased concerns over the greenhouse gas emissions, as well as a desire by countries to diversify their energy portfolios in the name of "energy security." Now is the time to assess the prospects and future course of each of the market sectors in this growing, worldwide industry.

### What is Included in this Report?

UxC's NIVC report includes coverage of all sectors in the nuclear industry, including the front-end fuel markets, the broader reactor sector, as well as the back-end of the fuel cycle.

There is no publicly distributed report currently available that provides such comprehensive coverage of the growing global nuclear marketplace. Separate chapters in the NIVC report cover:

- Uranium
- Conversion
- Enrichment
- Fuel fabrication
- New reactor construction
- Reactor operations & services
- Used fuel treatment, storage & disposal
- Radioactive waste management & disposal
- Decontamination & decommissioning

Each sector is analyzed individually on the basis of:

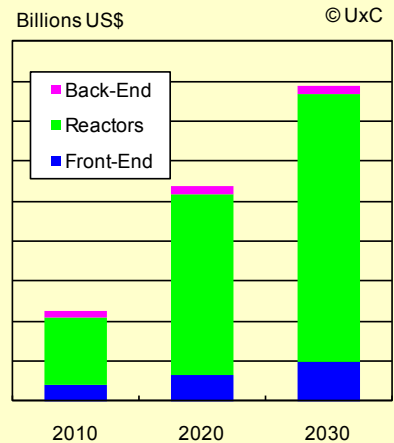

- Market overview
- Key players
- Market shares
- Alliances & partnerships
- Supply & demand
- Pricing & profit margins
  - Total market size
  - Future market trends
  - Forecasts through 2030

### Why Purchase this Report?

Combining UxC's decades of experience and knowledge of the nuclear industry, this report provides detailed information and practical analysis for anyone considering entry or expansion in this dynamic global nuclear marketplace.

## Post-Fukushima Analysis Presented in April 2011 Addendum

### Nuclear Market Size Growth

The goal of the NIVC report is to examine the current status and future prospects (through 2030) for each sector comprising the entire "nuclear industry value chain," so as to support future decisions by investors, potential new entrants, and current participants in the global nuclear marketplace.

Whatever your position, it is in your interest to seriously explore the future of the nuclear industry, and the broader trends that will impact it going forward. Each market sector has its own unique characteristics, but this report gives you all the tools to start the process of understanding the opportunities and potential pitfalls within each sector.

UxC's 2011 Nuclear Industry Value Chain package is available for immediate purchase for \$5000. For more information, please contact Jonathan Hinze at [jonathan.hinze@uxc.com](mailto:jonathan.hinze@uxc.com) or +1-603-425-1185.
