StoreFUEL

Covering the Growing Importance of Back End Activity

Bringing UxC Experience to Backend Market Coverage

The Ux Consulting Company (UxC) is now the publisher of both the *SpentFUEL* and *StoreFUEL* industry newsletters. UxC is excited to bring its unique approach in the front-end market to the back-end.

The Latest Developments in Spent Fuel Management and Transportation

SpentFUEL is the only industry newsletter devoted solely to spent fuel management and transportation issues. Published every Friday, 50 times a year, *SpentFUEL* covers the latest market and political developments to bring the reader up-to-date on the numerous activities and issues facing utilities and back-end suppliers today. Topics include the U.S. geologic disposal program, at-reactor dry cask storage plans and licensing activities, contract awards, interim storage proposals, legislation and budget issues affecting the backend, utility spent fuel pool information, surplus plutonium disposition, and transportation.

The publication also covers developments in the waste management policies and programs in other parts of

the world, including both short- and long-term storage plans, developments related to national or regional permanent disposal facilities, reprocessing, and mixed-oxide fuel use.

The cost of a one year subscription to *SpentFUEL* is US\$2,100.00.

StoreFUEL ... and Decommissioning Report

StoreFUEL...and Decommissioning Report was created to assist utility fuel managers, cask designers, fabricators, and other related companies in staying current on the U.S. Nuclear Regulatory Commission's (NRC) certification process for spent fuel cask technology. *StoreFUEL*, published on the first Tuesday of every month, details recent cask vendor licensing milestones, updates on licensing activities for each vendor, a brief summary of all active U.S. dry storage programs, upcoming licensing milestones, and a brief report on decommissioning activities when applicable.

The cost of a one year subscription to *StoreFUEL* is US\$1,600.00.

Related Services

Both publications cover major fuel cycle and backend-related conferences including the Global Nuclear Fuel Reprocessing and Recycling Conference, NEI's Dry Storage Information Forum, INMM's Spent Fuel Management Seminar, PATRAM, WNA's Annual Symposium, and IAEA's International Conference on Management of Spent Fuel from Nuclear Power Reactors.

This year, UxC acquired additional staff expertise in the backend of the fuel cycle and has since developed computer models of back end activities and completed special client projects addressing spent fuel management strategies, waste management, and plant decommissioning. This is in addition to its offerings that include in-depth profiles of utilities and vendors.

For more information, please contact the newsletter's managing editor Carlyn Greene at carlyn.greene@uxc.com or +1-770-833-6339.
