Table of Contents

Executive Summary	i
<i>Essay: Recent Fabrication Market Highlights and Trends</i>	i
<i>Reactor Developments and LWR Fuel Demand Forecasts</i>	i
<i>UxC Utility Fabrication Market Survey</i>	ii
<i>The World's LWR Nuclear Fuel Fabricators</i>	ii
<i>Supply and Demand in the LWR Fuel Fabrication Markets</i>	iii
<i>LWR Nuclear Fuel Fabrication Markets</i>	iii
<i>LWR Nuclear Fuel Fabrication Prices</i>	iv
<i>Non-LWR Nuclear Fuel Fabrication Markets</i>	iv
Introduction and Overview	10
What's New in the 2023 Report?	11
• FMO Reference Document	12
Structure of Report	13
1 – Essay: Recent Fabrication Market Highlights and Trends	15
Improving Demand Underpinning Positive Outlook for Fabricators	15
Western Fabricators Take Europe's VVER Fuel Market	17
New Fuel Designs Going Mainstream	18
ATF, HBF, and LEU+: A Match Made in Heaven?	19
Other Important Developments	22
• Additive Manufacturing Becoming Reality	22
• SAMR Fuel Fabrication Preparations Proceed	22
• Recycled Fuel Coming Back into Vogue?	23
• Cobalt-60 Production on the Horizon?	23
2 – Reactor Developments and Demand Outlook	24
UxC Nuclear Power Regions	25
Reactor Capacities Anticipated by Country by 2040	26
Alternative UxC Reactor Forecast Scenarios	29
Current and Future Reactor Types	30
• Currently Operating Reactors	30
• New Reactors	31
New Reactor Types	32
New Reactor Vendors	32
Fuel Fabrication Demand Forecasts	34
• UxC Fabrication Market Demand Modeling	34
UxC Requirements Model (URM)	34
Use of URM Fabrication Demand Forecasts	34
• UxC Fabrication Demand Forecasts	35
Global LWR Fuel Fabrication Requirements	35
Regional LWR Fuel Fabrication Requirements	36
LWR Fabrication Requirements by Fuel Type	37
Conclusions from Demand Analysis	38
3 – Results from UxC Utility Fabrication Market Survey	39
State of the Market	39
Cycle Length	40
New Contract Scope	40
Procurement Lead Time	41
Procurement Approach	41
Vendor Qualification	42
Adequacy of Competition	42
Vendors Declining to Bid	43
Fuel Delivery Schedules and Inventories	43

Scope of Services Under Fuel Supply Contracts	44
Consistency of Supply	44
Fuel Contracting Criteria	45
Changes to Fabrication Procurement.....	45
Accident Tolerant Fuels.....	45
• Interest in ATFs.....	45
• Drivers Promoting ATF Deployment	46
• Timeframe for ATF Commercialization	46
High Burnup Fuels, Extended Fuel Cycles, and LEU+	47
Geopolitics and Security of Supply.....	47
Westinghouse Sale Impacts.....	48
Major Industry Trends	48
Conclusions from Utility Survey.....	49
Appreciation for our Survey Respondents.....	50
4 – The World’s Nuclear Fuel Fabricators	51
The Mega-Vendors.....	53
• Framatome.....	53
Ownership and Organization.....	53
Ownership.....	54
Current Organization.....	54
Fuel Business Unit Overview	54
European Fuel Fabrication Operations	54
Production Facilities.....	54
Markets and Products.....	55
• TVEL Fuel Company Subcontract.....	57
• TVEL Joint Venture in Lingen and VVER Fuel Licensing.....	57
Framatome’s Fuel Assembly Designs.....	58
U.S. Fuel Fabrication Operations	61
Production Facilities.....	61
Markets and Products.....	62
ATF, HBF, and Advanced Fuel Developments	62
Japanese Fuel Fabrication Operations	64
Chinese Fuel Fabrication Operations.....	64
Kazakh Fuel Fabrication Operations	65
Comprehensive Fuel Offerings.....	65
SAMR Fuel Activities.....	65
Possible Future Developments	66
• Global Nuclear Fuel (GNF)	68
Ownership and Organization.....	68
U.S. and European Fuel Fabrication Operations.....	69
Production Facilities.....	69
Markets and Products	69
• Strategic Alliance with TVEL	70
GNF’s Fuel Assembly Designs	71
ATF, HBF, and Advanced Fuel Developments	73
Natrium Fuel Fabrication Facility.....	74
Japanese Fuel Fabrication Operations	74
Production Facilities.....	74
Markets and Products	75
Comprehensive Fuel Offerings.....	76
Possible Future Developments	76
• Westinghouse Electric Company	78
Ownership and Organization.....	78
Ownership.....	78
Organization.....	79
• Regional Organizations.....	79
• Westinghouse Nuclear Fuel Division Overview.....	80
• Agreements and Joint Ventures with Foreign Suppliers.....	81
European Fuel Fabrication Operations	82
Westinghouse Electric Sweden, Västerås Nuclear Fuel Factory	82
Springfields Fuels Ltd.	83

Markets and Products	84
U.S. Fuel Fabrication Operations	84
Columbia Fuel Fabrication Facility	84
• Operational Incidents.....	85
• License Renewal and Upgrades.....	86
Markets and Products	87
Westinghouse Fuel Assembly Designs	88
ATF, HBF, and Advanced Fuel Developments.....	90
VVER Fuel Fabrication Operations.....	92
VVER-1000	92
VVER-440	94
Potential Fuel Fabrication JV with Ukraine.....	96
Chinese Fuel Fabrication Operations	97
Comprehensive Fuel Offerings	97
SAMR Fuel Activities	98
Possible Future Developments.....	98
International Suppliers	100
• TVEL Fuel Company (TVEL)	100
Ownership and Organization	100
Production Facilities	103
MSZ – Elektrostal	103
• Production Capacity.....	103
• MSZ Fuel Designs	104
• Modernization Program	106
NCCP – Novosibirsk.....	106
Plans for Expanding Fabrication Capability	107
TVEL – Framatome	108
Consolidation of TVEL Fabrication Activities	109
Technical and Engineering Support.....	110
Past, Present, and Future Markets.....	110
VVER Fuel Markets.....	110
• VVER-1000 Market.....	111
• VVER-440 Market.....	113
• VVER-1200 and VVER-TOI Market.....	115
BWR and PWR Fuel Markets	116
• Framatome Subcontract	116
• TVS-KVADRAT – TVEL’s PWR Reload Fuel Initiative	117
PHWR Fuel Market	118
UO ₂ Powder Market.....	118
TVEL Technology and Fuel Designs	118
VVER-440 Fuel Assemblies	119
VVER-1000 Fuel Assemblies	121
VVER-1200 / VVER-TOI Fuel Assemblies	124
Western PWR Fuel Assemblies	125
ATF and Advanced Fuel Developments.....	126
Possible Future Developments.....	127
• KEPCO Nuclear Fuel (KNF)	129
Ownership and Organization	129
Fuel Fabrication Operations	129
Current and Future Markets.....	132
Domestic Market	132
Foreign Markets	132
KNF Fuel Designs	134
Comprehensive Fuel Offerings	136
Possible Future Developments.....	136
Regional and National Fuel Suppliers.....	139

Introduction and Overview

UxC, LLC (UxC) is pleased to present the 2023 *Fabrication Market Outlook* (FMO) report, which is the 17th annual edition in this series. This year's report builds upon the significant enhancements made in previous editions as part of our ongoing effort to improve information exchange and understanding in the all-important global nuclear fuel fabrication marketplace.

The global nuclear power industry has clearly turned a corner and the negative impacts of the 2011 Fukushima accident are now mostly behind us. Globally, trends are quickly shifting back to supporting life extensions of existing reactors and adding new units to deal with the rising challenges of energy security and climate change. While the fuel fabrication industry is still being affected by the previous premature reactor retirements in certain regions, especially in key markets in North America, Western Europe, and Japan, there have continued to be ongoing expansions of nuclear power in other key markets, such as China, Russia, South Korea, India, and parts of the Middle East. Thus, the markets for fuel fabrication are adapting to these important shifts in nuclear power around the world.

Globally, demand for nuclear fuel is now showing signs of improving growth trends over the next few decades. Many nations are pushing forward on reactor expansions, which means that the world needs substantial amounts of nuclear fuel fabrication, especially in the more rapid growth regions, and thus the industry will need to respond to various competing trends on the demand side.

On the supply side, there have been numerous events affecting the future outlooks and operating structures for key fabrication vendors. In France, Framatome's fuel fabrication division is now fully integrated with the reactor construction and services divisions under EDF's ownership. Westinghouse has new owners this year comprised of Brookfield Renewable Partners and Cameco Corporation, which could lead to additional changes to the way the storied PWR reactor and fuel vendor will operate going forward. Meanwhile, the Global Nuclear Fuel (GNF) partnership is now owned by just GE and Hitachi, allowing the partners to fold the fuel fabrication business into their existing GE-Hitachi Nuclear Energy joint venture.

Russian vendor TVEL, which is still the dominant VVER fuel supplier, continues to face additional headwinds as Russia's military invasion of Ukraine has fundamentally reshaped the entire global nuclear fuel markets. Thus, despite winning a PWR fuel reload order from Sweden's Vattenfall a few years ago, the war has now fully halted TVEL's ambitions to become a supplier of western-designed PWR fuel in both Europe and the U.S. Instead, TVEL is now dealing with encroachment of both Westinghouse and Framatome in the VVER fuel market in Eastern Europe.

These collective market developments, coupled with various other issues in the nuclear industry, in general, and the fuel fabrication industry have suggested that there

could be big changes in worldwide fabrication markets. The interactions between buyers and sellers in the years ahead and our assessment of such changes are addressed throughout this FMO report.

As with previous editions, the primary focus of this report is fuel fabrication for large light water reactors (LWRs) – boiling water reactors (BWRs) and pressurized water reactors (PWRs), including VVER-type PWRs – as these comprise the vast majority of the nuclear plants currently in operation around the world and those planned for the future.

There are also several pressurized heavy water reactors (PHWRs) operating in Canada and other nations, advanced gas-cooled reactors (AGRs) in the United Kingdom, and several light water-cooled, graphite-moderated reactors (LGRs) in Russia (RBMK and EGP reactors). However, these regions/reactors represent unique fuel fabrication markets, which are covered at the end of this report.

In the chapters that follow, we address many of the diverse commercial, institutional, economic, and technical aspects of nuclear fuel, fuel fabrication, and the international fuel fabrication market. The report is intended to serve a variety of purposes:

- For those with little knowledge of nuclear fuel fabrication and its markets, the FMO serves as a primer, providing a solid background in various aspects of the industry and an understanding of how its markets function.
- For those knowledgeable in the fundamentals of fabrication, the FMO offers analyses of a variety of its aspects based on several decades of participation in the fabrication industry.
- Finally, for those who are actively involved in the industry as buyers or sellers of nuclear fuel assemblies, the FMO supplies additional up-to-date insights to assist in the improvement of existing nuclear fuel programs and in the development of new fabrication-related initiatives.

What's New in the 2023 Report?

In the 2023 FMO, we have updated all sections of the report and continued with the organization and format of the report from previous years. This includes our *FMO Reference Document*, which incorporates fabrication market discussion that are considered reference materials and do not change from year to year very much.

The FMO presents market data and analysis consistent with the style of UxC's other *Market Outlook* reports, and all the discussions and analyses have been updated to reflect the events of the past year. As part of the lead-up to this report, we have again conducted a survey of international utility attitudes toward the fabrication market.

This year's essay, titled "Recent Fabrication Market Highlights and Trends," reviews all the major new and exciting developments shaping the global fuel fabrication markets these days. This includes analysis of shifts in demand, the evolving situation in

Europe's VVER market, the latest status of new fuel designs, efforts to deploy Accident Tolerant Fuels (ATFs), High Burnup Fuels (HBFs), and LEU+ fuel, as well as various other interesting developments.

We have classified the world's fabricators into three categories: the Mega-Vendors, very large and diversified suppliers active in multiple markets; International Suppliers, larger suppliers with both large domestic and international fuel sales; and the smaller regional and national suppliers. Analysis of each vendor's current situation and potential future developments in terms of market access and technical developments are presented in detail.

All data and forecasts in the new 2023 FMO again extend all the way to 2040. This year's fuel fabrication demand projection is drawn from our proprietary *UxC Requirements Model* (URM), which, starting with UxC's own internal forecasts for nuclear power capacities, calculates demand on a reactor-by-reactor, cycle-by-cycle basis. We continue to refine and improve our reactor forecasts and the URM and believe the current version of the URM produces more accurate forecasts than in prior years. UxC's nuclear growth forecasts are updated quarterly, and the fabrication demand projections used in this report reflect our latest analyses in this regard. In this 2023 edition, we present extended supply and demand as well as price forecasts through 2040.

The FMO provides analyses of the current and future markets for fuel for LWRs, i.e., BWRs and PWRs; however, we also include an updated and expanded discussion of the fabrication markets for non-LWR fuel (e.g., PHWRs, AGRs, and LGRs). Special efforts have been made to enhance our analysis of the PHWR fuel fabrication market, which represents about 11% of the world's reactors today. In addition, we include a brief review of the potential fuel fabrication market for small modular reactors (SMRs) and other advanced reactors, although the future of SMRs and other advanced reactor designs remains in flux at this time.

Finally, as part of our continuing efforts to improve and enhance the analysis of the fuel fabrication markets, UxC made efforts to engage with global fuel fabricators, as well as their customers, to obtain the most accurate and up-to-date information possible. For this year's Utility Fabrication Market Survey, we received many excellent responses from utilities around the world.

- **FMO Reference Document**

The FMO report is split into two documents. The first is this main FMO report, which includes all the chapters described in the following **Structure of Report** section. Second, to make the FMO more user-friendly, and to reduce the total volume of the main report, we have extracted sections of previous FMOs that have remained relatively constant over the years and put them into a separate *FMO Reference Document*. This reference document is available to all FMO subscribers and can be accessed as a PDF file downloadable from the UxC Client Site (note that subscriber

login credentials are required).¹ The *FMO Reference Document* includes the following sections:

- Nuclear Fuel Fabrication Market Primer
- History of the Nuclear Fuel Fabrication Industry
- Utility Procurement Approaches and Contracting Issues
- Typical Fuel Fabrication Service Contracts
- Fuel Assembly Design and Manufacture
- Nuclear Fuel Performance

Structure of Report

This year's edition of the FMO continues our efforts to create a user-friendly text with each chapter containing clear and distinct information. The reader is encouraged to begin at **Chapter 1**, as there is intended to be a continuous and logical flow to the report; however, each individual chapter provides unique topical coverage that can also be considered independently from the rest of the report's contents. The report is structured as follows:

This year's in-depth topical essay in **Chapter 1 – Essay: Recent Fabrication Market Highlights and Trends** examines numerous key developments and trends that have been shaping the fabrication market over the past year. These trends affect both supply and demand of fabrication as well as the products offered in the market and the overall market structure.

Chapter 2 – Reactor Developments and Demand Outlook begins our review of the fabrication market fundamentals with a look at current and future demand. This chapter presents UxC forecasts for nuclear power growth through 2040 from our *Nuclear Power Outlook* (NPO) and the resulting fabrication demand projection through 2040 using our *UxC Requirements Model* (URM).

Chapter 3 – Results from UxC Utility Fabrication Market Survey presents the results of our latest utility market survey and analyzes the latest trends in utility views on the fabrication market.

The supply side of the equation is addressed in **Chapter 4 – The World's Nuclear Fuel Fabricators**. This chapter includes in-depth profiles of each of the world's LWR fuel suppliers, their production facilities, their products, the markets they serve, and additional items of interest.

¹ Access to the FMO subscriber website is at: <https://www.uxc.com/c/MktRptEssays.aspx?rpt=fmo>

Chapter 5 – Supply and Demand Analysis combines all the preceding discussions with a comparison of supply and demand for LWR fuel through 2040 on a global level as well as in each of the principal geographic market segments.

Since the market for fabricated LWR fuel is segmented both geographically and technically, each of these individual market segments is discussed and analyzed in **Chapter 6 – Global and Regional Market Analysis**.

Chapter 7 – Nuclear Fuel Fabrication Prices discusses the factors affecting current and future LWR fuel prices and presents UxC’s latest projections for both PWR and BWR fuel fabrication prices in different regional markets through 2040.

Finally, in **Chapter 8 – Non-LWR Fuel Fabrication Markets**, we present a discussion of the unique fuel fabrication markets for PHWRs, GCRs, and LGRs. Fuel developments for SMRs and advanced reactors are also addressed at the end of this chapter.

The report also contains a series of appendices and a glossary, which provide background information and other useful items on the fabrication market. The following are found at the end of this report:

Appendix A – UxC 2023 Fuel Fabrication Market Survey Sample

Appendix B – Fuel Fabricator Contact Information

Glossary
