

## Covering the Growing Importance of Back-end Activities

### Bringing UxC's Experience to Back-end Market Coverage

Since 2007, UxC, LLC (UxC) has published the *SpentFUEL* industry newsletter and the *StoreFUEL* monthly report, and therefore, brings its unique approach in the front-end market to the back-end.

### The Latest Developments in Spent Fuel Management and Transportation

*SpentFUEL* is the only industry newsletter devoted solely to spent fuel management and transportation issues. Published every Friday, 50 times a year, *SpentFUEL* covers the latest market and political developments to bring the reader up-to-date on the numerous activities and issues facing utilities and back-end suppliers. Topics include: the U.S. geologic disposal program, extended storage issues, at-reactor dry cask storage plans and licensing activities, contract awards, interim storage proposals, legislation and budget issues affecting the back-end, utility lawsuits to recover spent fuel costs, utility spent fuel pool information, surplus plutonium disposition, DOE spent fuel, and transportation.

The publication also covers developments in waste management policies and programs around the globe, including short- and long-term storage plans, developments related to national or regional permanent disposal facilities, reprocessing, and mixed-oxide fuel use.

The cost of a one year subscription to *SpentFUEL* starts at US\$2,500.00.

### Dry Storage in the U.S.

The *StoreFUEL and Decommissioning Report* was created to assist utility fuel managers, cask designers, fabricators, and other related companies in staying current on the U.S. Nuclear Regulatory Commission's (NRC) certification process for spent fuel cask technology. *StoreFUEL*, published the first week of every month, also includes U.S. cask vendor licensing activities, a brief summary and detailed tables of all active and planned dry storage programs in the U.S., and updates on shutdown reactors and other decommissioning activities in the U.S.

The cost of a one year subscription to *StoreFUEL* starts at US\$2,000.00.

### Related Services

Both publications cover major fuel cycle and backend-related conferences including the NEI's Used Fuel Management Conference, INMM's Spent Fuel Management Seminar, Waste Management, PATRAM, WNA's Annual Symposium, IAEA's International Conference on Management of Spent Fuel from Nuclear Power Reactors, and U.S. NRC-sponsored conferences such as the annual Fuel Cycle Information Exchange and the Regulatory Information Conference. In addition to the newsletters, UxC has developed computer models of backend activities and has completed special client projects addressing spent fuel management strategies, waste management, and plant decommissioning.
