<b>Executive Summary</b>	<b>i</b>
<i>Essay: Implications of Russia's War for the Fabrication Market</i>	i
<i>Reactor Developments and LWR Fuel Demand Forecasts</i>	i
<i>UxC Utility Fabrication Market Survey</i>	ii
<i>The World's LWR Nuclear Fuel Fabricators</i>	ii
<i>Supply and Demand in the LWR Fuel Fabrication Markets</i>	iii
<i>LWR Nuclear Fuel Fabrication Markets</i>	iii
<i>LWR Nuclear Fuel Fabrication Prices</i>	iv
<i>Non-LWR Nuclear Fuel Fabrication Markets</i>	iv
<b>Introduction and Overview</b>	<b>10</b>
What's New in the 2022 Report?	11
• FMO Reference Document	12
Structure of Report	13
<b>1 – Essay: Implications of Russia's War for the Fabrication Market</b>	<b>15</b>
TVEL's Global Position Prior to Russia's Invasion of Ukraine	15
• European VVER Market	15
VVER-1000s	16
VVER-440s	17
• European ERU Market	19
• Western PWR Reload Market	20
War Impacts on the European VVER Market	21
• Ukraine	22
• Finland	22
• Czechia	23
• Slovakia	23
• Bulgaria	23
• Hungary	24
• Responses by Western Fabricators	24
Westinghouse	24
Framatome	24
• Net Implications for European VVER Supply and Demand	25
War Impacts on the European ERU Market	26
War Impacts on the Western PWR Reload Market	26
Steady State: TVEL's Market Outside of Europe	27
Final Observations	28
<b>2 – Reactor Developments and Demand Outlook</b>	<b>30</b>
UxC Nuclear Power Regions	31
Reactor Capacities Anticipated by Country by 2040	32
Alternative UxC Reactor Forecast Scenarios	35
Current and Future Reactor Types	36
• Currently Operating Reactors	36
• New Reactors	37
New Reactor Types	38
New Reactor Vendors	38
Fuel Fabrication Demand Forecasts	40
• UxC Fabrication Market Demand Modeling	40
UxC Requirements Model (URM)	40
Use of URM Fabrication Demand Forecasts	40
• UxC Fabrication Demand Forecasts	41
Global LWR Fuel Fabrication Requirements	41
Regional LWR Fuel Fabrication Requirements	42
LWR Fabrication Requirements by Fuel Type	43
Conclusions from Demand Analysis	44

<b>3 – Results from UxC Utility Fabrication Market Survey</b>	<b>45</b>
State of the Market .....	45
Cycle Length .....	46
New Contract Scope .....	46
Procurement Lead Time .....	47
Procurement Approach .....	47
Vendor Qualification .....	48
Adequacy of Competition .....	48
Vendors Declining to Bid .....	49
Fuel Delivery Schedules and Inventories .....	49
Scope of Services Under Fuel Supply Contracts .....	50
Consistency of Supply .....	50
Fuel Contracting Criteria .....	51
Views on Accident Tolerant Fuels .....	51
• Interest in ATFs .....	51
• Drivers Promoting ATF Deployment .....	52
• Timeframe for ATF Commercialization .....	52
Geopolitics and Security of Supply .....	53
Major Industry Trends .....	53
Conclusions from Utility Survey .....	54
Appreciation for our Survey Respondents .....	55
<b>4 – The World’s Nuclear Fuel Fabricators</b>	<b>56</b>
The Mega-Vendors .....	58
• Framatome .....	58
Ownership and Organization .....	58
Ownership .....	59
Current Organization .....	59
Fuel Business Unit Overview .....	59
European Fuel Fabrication Operations .....	59
Production Facilities .....	59
Markets and Products .....	61
• TVEL Fuel Company Subcontract .....	62
• TVEL Joint Venture in Lingen and VVER Fuel Licensing .....	62
Framatome’s Fuel Assembly Designs .....	63
U.S. Fuel Fabrication Operations .....	66
Production Facilities .....	66
Markets and Products .....	66
Accident Tolerant Fuel and Advanced Fuel Developments .....	67
Japanese Fuel Fabrication Operations .....	69
Chinese Fuel Fabrication Operations .....	69
Kazakh Fuel Fabrication Operations .....	69
Comprehensive Fuel Offerings .....	70
Possible Future Developments .....	70
• Global Nuclear Fuel (GNF) .....	72
Ownership and Organization .....	72
U.S. and European Fuel Fabrication Operations .....	73
Production Facilities .....	73
Markets and Products .....	73
• Strategic Alliance with TVEL .....	74
GNF’s Fuel Assembly Designs .....	75
Accident Tolerant Fuel Developments .....	77
Japanese Fuel Fabrication Operations .....	78
Production Facilities .....	78
Markets and Products .....	79
Comprehensive Fuel Offerings .....	80
Possible Future Developments .....	80
• Westinghouse Electric Company .....	82
Ownership and Organization .....	82
Ownership .....	82

Organization .....	83
• Regional Organizations .....	83
• Westinghouse Nuclear Fuel Division Overview .....	84
• Agreements and Joint Ventures with Foreign Suppliers .....	85
European Fuel Fabrication Operations.....	86
Westinghouse Electric Sweden, Västerås Nuclear Fuel Factory.....	86
Springfields Fuels, Ltd. – Preston, Lancashire, UK .....	87
Markets and Products .....	88
U.S. Fuel Fabrication Operations .....	89
Columbia Fuel Fabrication Facility .....	89
• Operational Incidents.....	89
• License Renewal and Upgrades.....	91
Markets and Products .....	91
Westinghouse Fuel Assembly Designs .....	92
Accident Tolerant Fuel Developments.....	94
VVER Fuel Fabrication Operations.....	96
VVER-1000 .....	96
VVER-440 .....	98
Potential Fuel Fabrication JV with Ukraine.....	99
Chinese Fuel Fabrication Operations .....	99
Comprehensive Fuel Offerings .....	100
Possible Future Developments.....	100
International Suppliers .....	102
• TVEL Fuel Company (TVEL) .....	102
Ownership and Organization .....	102
Production Facilities .....	105
MSZ – Elektrostal .....	106
• Production Capacity.....	106
• MSZ Fuel Designs .....	106
• Modernization Program .....	108
NCCP – Novosibirsk.....	108
Plans for Expanding Fabrication Capability .....	110
TVEL – Ukraine .....	110
TVEL – Czechia/India.....	110
TVEL – ENUSA .....	110
TVEL – Framatome .....	111
TVEL – GNF-A .....	111
Consolidation of TVEL Fabrication Activities .....	111
Technical and Engineering Support.....	112
Past, Present, and Future Markets .....	112
VVER Fuel Markets.....	113
• VVER-1000 Market.....	113
• VVER-440 Market.....	115
• VVER-1200 and VVER-TOI Market.....	117
BWR and PWR Fuel Markets .....	118
• Framatome Subcontract .....	118
• TVS-KVADRAT – TVEL’s PWR Reload Fuel Initiative .....	118
PHWR Fuel Market .....	121
UO <sub>2</sub> Powder Market.....	121
TVEL Technology and Fuel Designs .....	121
VVER-440 Fuel Assemblies .....	121
VVER-1000 Fuel Assemblies .....	124
Western PWR Fuel Assemblies .....	128
Accident Tolerant Fuel Developments.....	129
Possible Future Developments.....	130
• KEPCO Nuclear Fuel (KNF) .....	132
Ownership and Organization .....	132
Fuel Fabrication Operations .....	132
Current and Future Markets.....	135
Domestic Market .....	135
Foreign Markets .....	135
KNF Fuel Designs .....	137
Comprehensive Fuel Offerings .....	139
Possible Future Developments.....	139

Regional and National Fuel Suppliers .....	141
• ENUSA Industrias Avanzadas, S.A. (ENUSA) – Spain .....	142
Ownership and Organization .....	142
Fuel Fabrication Operations – Juzbado Nuclear Fuel Factory .....	143
Current and Future Markets .....	144
Spanish Market .....	145
Foreign Markets .....	146
ENUSA Fuel Assembly Designs .....	147

## Introduction and Overview

UxC, LLC (UxC) is pleased to present the 2022 *Fabrication Market Outlook* (FMO) report, which is the 16<sup>th</sup> annual edition in this series. This year's report builds upon the significant enhancements made in previous editions as part of our ongoing effort to improve information exchange and understanding in the all-important global nuclear fuel fabrication marketplace.

The global nuclear power industry continues to be shaped by historical events, such as the 2011 Fukushima accident, but prospects for broader growth of nuclear power, including in traditional markets, have dramatically improved in the last year. Globally, trends are shifting back to supporting life extensions of existing reactors and adding new units to deal with the rising challenges of energy security and climate change. While the fuel fabrication industry is still being affected by the rash of premature reactor retirements in certain regions, especially in key markets in North America, Western Europe, and Japan, there have continued to be ongoing expansions of nuclear power in other key markets, such as China, Russia, South Korea, India, and parts of the Middle East. Thus, the markets for fuel fabrication are adapting to these important shifts in nuclear power around the world.

Globally, demand for nuclear fuel has not seen significant increases over the past few years, and the forecasts for its growth are lower than they were a decade ago. Nevertheless, many nations are pushing forward on reactor expansions, which means that the world needs substantial amounts of nuclear fuel fabrication, especially in the more rapid growth regions, and thus the industry will need to respond to various competing trends on the demand side.

On the supply side, there have been numerous events affecting the future outlooks and operating structures for key fabrication vendors. In France, Framatome's fuel fabrication division is now fully integrated with the reactor construction and services divisions under EDF's ownership. Westinghouse's ownership by Brookfield Business Partners has led to various changes, including labor reductions, cost-cutting, and streamlining efforts, and there are now questions about another ownership change for Westinghouse as Brookfield has signaled a potential sale. Meanwhile, the Global Nuclear Fuel (GNF) partnership is now owned by just GE and Hitachi, allowing the partners to fold the fuel fabrication business into their existing GE-Hitachi Nuclear Energy joint venture.

Russian vendor TVEL, which is still the dominant VVER fuel supplier, is facing serious headwinds as Russia's military invasion of Ukraine, started in February 2022, continues to fundamentally reshape the entire global nuclear fuel markets. Thus, despite winning a PWR fuel reload order from Sweden's Vattenfall a few years ago, the war has now fully halted TVEL's ambitions to become a supplier of western-designed PWR fuel in both Europe and the U.S. Instead, TVEL is now having to defend against the encroachment of both Westinghouse and Framatome in the VVER fuel market, especially in Eastern Europe.

These collective market developments, coupled with various other issues in the nuclear industry, in general, and the fuel fabrication industry have suggested that there could be big changes in worldwide fabrication markets. The interactions between buyers and sellers in the years ahead and our assessment of such changes are addressed throughout this FMO report.

As with previous editions, the primary focus of this report is fuel fabrication for large light water reactors (LWRs) – boiling water reactors (BWRs) and pressurized water reactors (PWRs), including VVER-type PWRs – as these comprise the vast majority of the nuclear plants currently in operation around the world and those planned for the future.

There are also several pressurized heavy water reactors (PHWRs) operating in Canada and other nations, advanced gas-cooled reactors (AGRs) in the United Kingdom, and several light water-cooled, graphite-moderated reactors (LGRs) in Russia (RBMK and EGP reactors). However, these regions/reactors represent unique fuel fabrication markets, which are covered at the end of this report.

In the chapters that follow, we address many of the diverse commercial, institutional, economic, and technical aspects of nuclear fuel, fuel fabrication, and the international fuel fabrication market. The report is intended to serve a variety of purposes:

- For those with little knowledge of nuclear fuel fabrication and its markets, the FMO serves as a primer, providing a solid background in various aspects of the industry and an understanding of how its markets function.
- For those knowledgeable in the fundamentals of fabrication, the FMO offers analyses of a variety of its aspects based on several decades of participation in the fabrication industry.
- And, for those who are actively involved in the industry as buyers or sellers of nuclear fuel assemblies, the FMO supplies additional up-to-date insights to assist in the improvement of existing nuclear fuel programs and in the development of new fabrication-related initiatives.

## What's New in the 2022 Report?

---

In the 2022 FMO, we have updated all sections of the report and continued with the organization and format of the report from previous years. This includes our *FMO Reference Document*, which incorporates fabrication market discussion that are considered reference materials and do not change from year to year very much.

The FMO presents market data and analysis consistent with the style of UxC's other *Market Outlook* reports, and all the discussions and analyses have been updated to reflect the events of the past year. As part of the lead-up to this report, we have again conducted a survey of international utility attitudes toward the fabrication market.

This year's essay, titled "Implications of Russia's War for the Fabrication Market," delves into the anticipated changes to VVER fuel supply and demand and market trends due to Russia's war on Ukraine as several VVER operators look to shift away from reliance on Russia. Other expected changes to TVEL's position in the fabrication market due to fallout from the war are also analyzed.

We have classified the world's fabricators into three categories: the Mega-Vendors, very large and diversified suppliers active in multiple markets; International Suppliers, larger suppliers with both large domestic and international fuel sales; and the smaller regional and national suppliers. Analysis of each vendor's current situation and potential future developments in terms of market access and technical developments are presented in detail.

All data and forecasts in the new 2022 FMO have been extended by five additional years to 2040. This year's fuel fabrication demand projection is drawn from our proprietary *UxC Requirements Model* (URM), which, starting with UxC's own internal forecasts for nuclear power capacities, calculates demand on a reactor-by-reactor, cycle-by-cycle basis. We continue to refine and improve our reactor forecasts and the URM and believe the current version of the URM produces more accurate forecasts than in prior years. UxC's nuclear growth forecasts are updated quarterly, and the fabrication demand projections used in this report reflect our latest analyses in this regard. In this 2022 edition, we present extended supply and demand as well as price forecasts through 2040.

The report provides analyses of the current and future markets for fuel for LWRs, i.e., BWRs and PWRs; however, we also include an updated and expanded discussion of the fabrication markets for non-LWR fuel (e.g., PHWRs, AGRs, and LGRs). Special efforts have been made to enhance our analysis of the PHWR fuel fabrication market, which represents about 11% of the world's reactors today. In addition, we include a brief review of the potential fuel fabrication market for small modular reactors (SMRs) and other advanced reactors, although the future of SMRs and other advanced reactor designs remains in flux at this time.

Finally, as part of our continuing efforts to improve and enhance the analysis of the fuel fabrication markets, UxC made efforts to engage with global fuel fabricators, as well as their customers, to obtain the most accurate and up-to-date information possible. For this year's Utility Fabrication Market Survey, we received many excellent responses from utilities around the world.

## ● FMO Reference Document

The FMO report is split into two documents. The first is this main FMO report, which includes all the chapters described in the following **Structure of Report** section. Second, to make the FMO more user-friendly, and to reduce the total volume of the main report, we have extracted sections of previous FMOs that have remained relatively constant over the years and put them into a separate *FMO Reference Docu-*

ment. This reference document is available to all FMO subscribers and can be accessed as a PDF file downloadable from the UxC Client Site (note that subscriber login credentials are required).<sup>1</sup> The *FMO Reference Document* includes the following sections:

- Nuclear Fuel Fabrication Market Primer
- History of the Nuclear Fuel Fabrication Industry
- Utility Procurement Approaches and Contracting Issues
- Typical Fuel Fabrication Service Contracts
- Fuel Assembly Design and Manufacture
- Nuclear Fuel Performance

## Structure of Report

---

This year's edition of the FMO continues our efforts to create a user-friendly text with each chapter containing clear and distinct information. The reader is encouraged to begin at **Chapter 1**, as there is intended to be a continuous and logical flow to the report; however, each individual chapter provides unique topical coverage that can also be considered independently from the rest of the report's contents. The report is structured as follows:

This year's in-depth topical essay in **Chapter 1 – Essay: Implications of Russia's War for the Fabrication Market** examines all the likely and potential ways that Russia's military invasion of Ukraine will reshape the fuel fabrication markets, especially the VVER fuel market in Eastern Europe.

**Chapter 2 – Reactor Developments and Demand Outlook** begins our review of the fabrication market fundamentals with a look at current and future demand. This chapter presents UxC forecasts for nuclear power growth through 2040 from our *Nuclear Power Outlook* (NPO) and the resulting fabrication demand projection through 2040 using our *UxC Requirements Model* (URM).

**Chapter 3 – Results from UxC Utility Fabrication Market Survey** presents the results of our latest utility market survey and analyzes the latest trends in utility views on the fabrication market.

The supply side of the equation is addressed in **Chapter 4 – The World's Nuclear Fuel Fabricators**. This chapter includes in-depth profiles of each of the world's LWR fuel suppliers, their production facilities, their products, the markets they serve, and additional items of interest.

---

<sup>1</sup> Access to the FMO subscriber website is at: <https://www.uxc.com/c/MktRptEssays.aspx?rpt=fmo>

**Chapter 5 – Supply and Demand Analysis** combines all the preceding discussions with a comparison of supply and demand for LWR fuel through 2040 on a global level as well as in each of the principal geographic market segments.

Since the market for fabricated LWR fuel is segmented both geographically and technically, each of these individual market segments is discussed and analyzed in **Chapter 6 – Global and Regional Market Analysis**.

**Chapter 7 – Nuclear Fuel Fabrication Prices** discusses the factors affecting current and future LWR fuel prices and presents UxC’s latest projections for both PWR and BWR fuel fabrication prices in different regional markets through 2040.

Finally, in **Chapter 8 – Non-LWR Fuel Fabrication Markets**, we present a discussion of the unique fuel fabrication markets for PHWRs, GCRs, and LGRs. Fuel developments for SMRs and advanced reactors are also addressed at the end of this chapter.

The report also contains a series of appendices and a glossary, which provide background information and other useful items on the fabrication market. The following are found at the end of this report:

**Appendix A – UxC 2022 Fuel Fabrication Market Survey Sample**

**Appendix B – Fuel Fabricator Contact Information**

**Glossary**
