

Meeting Summaries

Premier Coverage of Nuclear Meetings

Reporting on Global Industry and Government Meetings

The nuclear industry is a living organism that grows and changes with each passing week. Around the world, leaders from both industry and government assemble to make decisions, set agendas, and exchange ideas that help shape the industry's present and future. This has never been truer than in the aftermath of the events at the Fukushima Daiichi plant, as all players in and associated with the nuclear industry are adjusting to a new reality.

UxC's *Meeting Summaries* service provides coverage of nuclear power and fuel cycle discussions around the globe in a timely and organized manner. In a world where major events conflict, as WNFM's Annual Meeting and Rosatom's ATOMEXPO did in June 2011, UxC's Meeting Summaries allow you to be in two places at once. For less than the cost of a single conference, UxC's Meeting Summaries provide you with coverage of major conferences each year, along with coverage of events specific to key areas, such as legislation, regulations, small modular reactors, uranium mining, and spent fuel management. In the past 12 months, UxC's *Meeting Summaries* have covered over 50 nuclear-related events - a figure that will only be exceeded in the coming year.

UxC's *Meeting Summaries* are delivered promptly electronically and are retained in our online database for future reference. Available to subscribers is access to each Meeting Summary's author, who can provide additional information as necessary.

Industry Events Coverage

UxC's *Meeting Summaries* provide coverage of industry conferences and meetings from around the world and across the fuel cycle. In 2011, UxC has provided coverage from all corners of the world, including China, Italy, Russia, South Africa, as well as the United States, just to name a few.

Industry conferences and conventions are where business is conducted, news is broken, and key ideas are exchanged. UxC's Meeting Summaries cover events related to each stage of the nuclear fuel cycle, from uranium mining to reactors to waste issues.

Government Activity Coverage

In addition to coverage of industry conferences, UxC's *Meeting Summaries* also cover a wide variety of government and regulatory hearings, academic lectures, and think-tank events.

Stay up to date on the U.S Nuclear Regulatory Commission's implementation of post-Fukushima safety measures. Follow the UK House of Lords Science & Technology Committee's inquiry into the nuclear research and development capabilities, as the country prepares for an era of new build. Monitor the progress of the Blue Ribbon Commission on American's Nuclear Future, as the debate over the country's waste management policy rages on. And keep tabs on the U.S. Congress as it deals with such critical legislation and oversight issues as DOE uranium inventories, nuclear plant safety, or spent fuel management.

UxC's *Meeting Summaries* are an invaluable resource for any organization that needs to keep a finger on the pulse of an ever-changing industry and policy landscape.

Please see our product flier in Adobe Acrobat PDF  format.

Events Covered:

(including but not limited to)

- Industry conferences
- Trade shows
- Government committee inquiries
- Regulatory meetings
- Confirmation hearings
- Budget hearings
- Legislation mark-ups
- Think-tank seminars
- Academic colloquiums
